Project

1. iMS MP Kangar

I was involved in the development of the **JPPB module** as part of the *Integrated and Interactive Municipal Services Management System* of the **Kangar Municipal Council**, contributing as a part-time backend developer. My primary responsibilities included building robust backend logic, integrating APIs with a frontend and implementing role-based access control across both layers.

Key features of the system included:

- **Tech stack:** PHP-Laravel, React.JS, Tailwind
- **Complex Approval Flow:** A multi-tiered approval system to handle various municipal processes with accuracy and accountability.
- **Visual Dashboard for Each Flow:** Interactive dashboards providing a clear overview of each process stage for enhanced transparency and management.
- **Multiple-Layer Authentication for Approval Levels:** Secure authentication mechanisms tailored for different user roles and approval hierarchies.
- **One-Stop Centre Platform:** A centralized system that consolidates various municipal services, streamlining workflows and improving user accessibility.

This project reflects my experience in developing scalable, secure systems with integrated frontend-backend architecture and complex business logic tailored for public sector solutions.

2. JPS NPIS

I contributed to the development of the **Notice of Change** and **Rolling Plan** modules for the **JPS - National Project Information System (NPIS)**. As a part-time developer, I handled both frontend and backend using **Vue.js**, **Vuetify**, and **Laravel**, including API integration and multi-level access control.

The system incorporated several critical functionalities:

- **Tech stack:** PHP-Laravel, Vue.JS, Vuetify
- **Multi-Step Endorsement Workflow:** Carefully structured workflows allowing data to be reviewed and endorsed through several stages, ensuring thorough project validation.
- **Dynamic Visualization Interface:** Built interactive and user-friendly dashboards to provide real-time tracking and clear insights into project timelines and statuses.
- **Tiered User Authorization:** Developed layered authentication and access logic to accommodate the system's hierarchical approval structure.
- **Unified Access Platform:** Created a centralized portal that integrates various planning and reporting functions, simplifying project oversight and collaboration.
- **Iterative Approval Loop:** Enabled seamless forward and backward transitions between approval stages, allowing revisions and re-submissions without disrupting overall process flow.

3. Inerva Manpower

A comprehensive manpower management platform designed specifically for the inspection field, connecting freelancers with job providers seamlessly.

- **Tech stack:** PHP-Laravel, ReactJS, Tailwind, JWT, Shadcn, Google Cloud Vision, Vertex AI, and Google Document AI.
- **Role-based Dashboards:** Separate and tailored dashboards for both freelancers and job providers.
- **Token Access System:** Job providers can access freelancer information using a tokenized permission system.
- **Interactive Map View:** Enables job providers to easily locate and connect with freelancers based on geographic location.
- **Streamlined Workflow:** Inerva Manpower simplifies and optimizes the entire freelancer-to-provider management process.

LIFTING EQUIPMENT INSPECTION

Job Order #: JO/25/4893/W
Owner Name: HOERBIGER KT MALAYSIA SDN BHD

Test Date: 14 DEC 2025
Issue Date: 14 DEC 2025
Expire Date: 13 JUN 2026

Item : Webbing Sling			
Spec : FLAT WOVEN			
Tag ID # :	TS 602756	Grade Type :	N/A
Diameter [in] :	25 MM	Pinned Load Test :	2 TONS
Effective Length [ft.] :	1MTM	Result of Inspection :	☒ acceptable ☐ REPAIR ☐ REJECT
Safety Rating / Weight Limit :			
☐ Safe to use with end hook ☐ Compatible with Hoisting Assembly on one end and other end attached with 1-to-1 Safety line ☐ Shackle MTL ☐ Yes with it ☐ YES			

TYPES OF EXAMINATION

☒ Visual inspection ☒ Dimensional check ☐ FUNCTION TEST AT MILL ☐ Non-destructive ☒ PROOF LOAD TEST

STANDARDS SPECIFICATION

ASME B30.9, BS EN 1492-1

MINIMUM QUALITY SYSTEMS

Part of inspection: ☐ MATERIALS ☐ SHACKLE ☐ HOOK ☐ CHAIN ☐

(Per Number of Inspectors)

Inspector	Serial Date	Initials	Signature	Date	Signature	Date
☐ MEET	☐ ORY	☐ FLANGEHEAD	☐ BOLTHOLE	☐ WELDER HAND-HABLE	☐ FLANGES/CORNER	
☐ LAC	☐ LIPKAWAN	☐ SERIAL DATE	☐ INITIALS	☐ DATE	☐ SIGNATURE	☐ DATE
☐ WHITE COLOUR	☐ BLACK/WHITE	☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING
☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING	☐ LIGHTNING

FINAL CONCLUSION

No cuts, nicks, or frayed edges
 Stitchings in contact with no loose threads
 No signs of burns or chemical damage
 Label/tag present and legible
 No signs of UV or heat degradation
 No knots or entanglements
 Loops and eyes in good condition

Colour coding (if used) is correct
 No hardened areas or stiffeners
 No contamination with oils or solvents

PRELIMINARY INSPECTION

Field JSON

A comprehensive manpower management platform designed specifically for the inspection field, connecting freelancers with job providers seamlessly.

- **Tech stack:** PHP-Laravel, ReactJS, Tailwind, JWT, Shadcn, React DnD.
- **Drag-and-Drop Certificate Items:** Intuitive interface to quickly organize and manage certificate item via drag-and-drop.
- **Autosave System:** Changes are automatically saved in real time to prevent data loss and ensure a smooth workflow.
- **Mobile-Friendly:** Fully responsive design optimized for smartphones and tablets for use in the field or on the go.

5. Inerva CCU

CCU Asset Management System – Complete Tracking & Certification Monitoring. A robust asset management platform built to efficiently track and manage CCUs (Cargo Carrying Units) and related assets within a company.

- **Tech stack:** PHP-Laravel, ReactJS, Tailwind, JWT, Shadcn
- **Asset Tracking:** Monitor the status and lifecycle of every asset across the organization.
- **Location Management:** Keep real-time track of where each asset is located.
- **Rental Monitoring:** View which customer is currently renting an asset, along with rental history.
- **Certification Alerts:** Automatically track certification expiry dates and receive alerts when certificates are due or expired.
- **Operational Transparency:** Improve asset utilization, ensure compliance, and reduce operational risk.

This system ensures your company stays informed, compliant, and in control of all asset movements and certifications.

6. TerraAgra

Terragara is designed to meet the needs of farmers by leveraging satellite and drone imagery for crop analysis and field monitoring. It empowers farmers to closely monitor their fields and make informed decisions based on real-time data.

- **Tech stack:** PHP-Laravel, NextJS, Tailwind, JWT, Mapbox
- **Field Monitoring:** Real-time insights into crop health, growth patterns, and environmental conditions.
- **Progress Tracking:** Visualize crop development and identify areas needing attention.
- **Task Management:** Track and prioritize tasks for efficient crop management.
- **Adaptation:** Adjust farming practices based on data for optimized yield and quality.
- **Supervisor Dashboard:** Centralized monitoring of field activities and task completion rates.
- **Admin Insights:** Comprehensive analytics for data-driven decision-making.

Terragara revolutionizes agricultural management by providing farmers with advanced tools and insights to optimize crop production and ensure sustainable farming practices.

7. MuslimCareMalaysia

MuslimCareMalaysia, an NGO dedicated to supporting Muslims globally, provides a streamlined platform for collecting donations. With our robust payment integration, donors can contribute conveniently and securely across various online platforms. Our platform facilitates the collection of donations to support Muslims in need worldwide, ensuring that every contribution makes a meaningful impact.

- **Tech Stack:** PHP-Laravel, Vue JS, Bootstrap
- **Seamless Payment Integration:** By integrating with multiple payment gateways, including credit/debit cards and digital wallets, we offer donors a seamless and secure donation experience.
- **Admin Dashboard:** Administrators have full control over campaign management through an intuitive dashboard. They can create, edit, and delete campaigns effortlessly, ensuring efficient and effective fundraising efforts.
- **Checkout Page Integration:** As part of the development team, I played a pivotal role in integrating the checkout page with the payment platform, ensuring a smooth and reliable donation process for users.
- **Donor Engagement:** We prioritize donor engagement by providing regular updates on campaign progress and impact, fostering transparency and trust among our supporters.
- **Reporting and Analytics:** Our platform offers comprehensive reporting and analytics features, empowering administrators to gain valuable insights into donation trends and campaign performance.

OMS, is a comprehensive web application designed to streamline event organization processes for event organizers. With its intuitive interface and robust features, EventPlannerPlus empowers organizers to manage events efficiently and effectively.

- **Tech Stack:** PHP-Laravel, React.JS, ShadCN UI, Tailwind
- **Event Management:** Easily create, manage, and update events for seamless planning and execution.
- **Ticket Payment Platform:** Integrate with various payment gateways to facilitate secure and hassle-free ticket sales.
- **Interactive Dashboard:** Personalized dashboards offer organizers insights and analytics to analyze customer data and track event performance.
- **Seamless Payment Integration:** Integrate with multiple payment platforms for convenient payment options for attendees.
- **User-Friendly Interface:** Prioritize user experience with an intuitive interface for enhanced usability and navigation.
- **Reporting and Analytics:** Robust features provide valuable insights into event metrics, attendee demographics, and ticket sales trends.

9. GSM Web Based Wireless Alarm Monitoring (WAM-IRHAM)

- **Technology Stack:** PHP Laravel, React.js, JWT, Tailwind
- **Real-Time Data Updates:** Continuous monitoring with instant updates on device statuses and performance metrics.
- **Interactive Mapping:** Dynamic mapping functionality plots device locations and status indicators, facilitating swift identification of issues.
- **Failure Detection and Alerting:** Intelligent system detects anomalies and failures, triggering alerts for timely intervention.
- **Efficient Site Management:** Integrated mapping streamlines site management, aiding teams in locating and prioritizing tasks.
- **Collaborative Problem-Solving:** Facilitates team collaboration through messaging and task assignment features, ensuring rapid issue resolution.

10. AROWS (Avialite Remote Working Station)

Task In Progress

- **Technology Stack:** PHP, Vanilla JS, Bootstrap.
- **Daily Check-in/Check-out:** Facilitates seamless daily check-in/check-out procedures for remote workers, ensuring accountability and tracking work hours effectively.
- **Task Submission:** Provides a platform for remote workers to submit their daily tasks, fostering transparency and efficient task management.
- **Supervisor Dashboard:** Empowers supervisors with a centralized dashboard to monitor ongoing tasks, track completion rates, and assign new tasks to team members seamlessly.
- **Task Assignment and Monitoring:** Supervisors can assign tasks to team members, track their progress, and evaluate completion rates and timeframes, ensuring productivity and accountability.
- **Admin Insights:** Offers comprehensive insights for administrators to view overall data, providing valuable analytics and reports to facilitate informed decision-making.

11. Intern Centre

The screenshot displays the 'Architect' web application interface. On the left is a sidebar with a 'PROFILE' section containing 'Personal Info' (highlighted), 'E-LOGBOOK' with 'Overview', 'Create New Report', and 'LogBook Content', and a 'MISC' section with 'Offer Letter' and 'Attendance'. The main content area shows the user's profile for 'Muhammad Zulhimi Bin Zunaidin' with the role 'Internship at Production - Casting'. Below this are two panels: 'PERSONAL INFORMATION' and 'INTERNSHIP INFORMATION'. The personal information panel lists fields for Name, ID No, IC No, Date of Birth, Email Address, and Mobile Number, all of which are redacted with black bars. The internship information panel lists fields for Offer Letter Date, Department to Join, Internship Start Date, Internship End Date, Supervisor, and Supervisor Title, with some values filled in and others redacted.

PERSONAL INFORMATION	INTERNSHIP INFORMATION
Name: [Redacted]	Offer Letter Date: 2021-09-15
ID No: 910077	Department to Join: Production - Casting
IC No: [Redacted]	Internship Start Date: 2021-10-04
Date of Birth: [Redacted]	Internship End Date: 2022-01-21
Email Address: [Redacted]	Supervisor: N/A
Mobile Number: [Redacted]	Supervisor Title: Production Assistant Engineer

- **Technology Stack:** PHP, Bootstrap, and Vanilla JavaScript.
- **Intern Logbook Submission:** Facilitates interns in submitting their logbook entries seamlessly, ensuring accurate documentation of their activities and progress.
- **Document Request System:** Enables interns to request documents efficiently through the web interface, streamlining the document retrieval process.
- **Unique Data Storage Approach:** Distinguishes itself by utilizing Odoo database for data storage instead of traditional server-side storage methods, enhancing data security and integrity.
- **XMLRPC Connections:** Utilizes XMLRPC for all connections, ensuring secure and efficient communication between the web application and the Odoo database.

Side Project

1. Gateway GSM

Top Today	
Device ID	No
601592052919	19
601592061100	4
601592052817	3

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="com.example.gatewaygsm">
    <uses-permission android:name="android.permission.RECEIVE_SMS"/>
    <uses-permission android:name="android.permission.INTERNET"/>
    <application
        android:allowBackup="true"
        android:icon="@mipmap/ic_launcher"
        android:usesCleartextTraffic="true"
        android:label="@string/app_name"
        android:roundIcon="@mipmap/ic_launcher_round"
        android:supportRtl="true"
        android:theme="@style/Theme.GatewayGSM">
        <activity android:name=".MainActivity">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>
</manifest>
```

- **Functionality:** Developed an Android application capable of functioning as a gateway for GSM SMS communication.
- **Integration with IoT Devices:** Enables IoT devices to utilize GSM networks for sending data in the form of SMS messages.
- **SMS Data Processing:** The Android app receives incoming SMS messages from IoT devices and processes the data contained within, preparing it for transmission to the server.
- **Server-Side Integration:** Data processed by the app is transmitted to the server, where it is saved to a SQL database for storage and further analysis.

2. Plane Code (Airplane Conceptual Design Software)

Aircraft Geometry & Drag Polar

Three final-year students from Nurtanio University collaborated on the development of Plane Code Software using C#. The software serves as a comprehensive tool for aircraft design, encompassing preliminary design, initial sizing, and aerodynamic analysis.

Feature Highlights:

- **Calculation Capabilities:** The software conducts complex calculations essential for aircraft design, catering to various data requirements and objectives.
- **Integration with XFOIL:** Integration with XFOIL enables the generation of NACA 4 and 5 series airfoil profiles, enhancing aerodynamic analysis capabilities.

- **Aircraft Geometry and Drag Polar Module:** One of the main focuses of the project is the development of the Aircraft Geometry and Drag Polar Module. This module, based on Dr. Jan Roskam's methodology, facilitates detailed analysis of wing, fuselage, and tail components.
- **Graph Digitalization:** Graphs from Dr. Roskam's methodology are digitized, enabling the software to automate calculations and streamline the design process.
- **Iterative Optimization:** The software incorporates iterative algorithms to optimize design parameters, ensuring the determination of optimal values, particularly during the initial sizing phase.

This collaborative effort aims to provide a user-friendly, yet powerful tool for aircraft designers, empowering them to conduct detailed analysis and optimization for enhanced aircraft performance and efficiency.

3. LoTUS (Lora Transmission Universal Sensor)

```
cvTransmit
AverageVoltage += analogRead(voltageSensor);
delay(1);
}
AverageCurrent /= MeasurementsToAverage;
AverageVoltage /= MeasurementsToAverage;
Serial.println(String(AverageCurrent)+" Current:Voltage "+String(AverageVoltage));

current_mA = AverageCurrent;
value = AverageVoltage;

vOUT = (value * 5.0) / 1024.0;
vIN = vOUT / (R2/(R1+R2));

//dataout = "\\deviceid\\:"+"\\deviceid"+"\\","\\current\\:"+"\\"+String(current_mA)+"\\","\\voltage\\:"+"\\"+String(vIN)+"\\";
dataout = "current:"+String(current_mA)+"\\,voltage:"+String(vIN);
Serial.println(dataout);
HC12.print(dataout);
```

Implementation of Remote Monitoring for Solar Devices

Traditionally, personnel have manually measured and recorded the voltage and current of solar device batteries in the field. With the introduction of this IoT device, remote monitoring becomes feasible, enabling measurements from distant locations such as offices.

- **Transmitter Setup:** The transmitter unit is equipped with a solar panel and a 12V LiFePO4 battery to provide power. Two sets of wires connect the solar device battery to the sensor for data acquisition.
- **Data Processing:** Housed within the transmitter box, an Arduino Nano processes the collected data. Utilizing LoRa technology, the processed data is transmitted to a receiver located inside the building.
- **Receiver Functionality:** The receiver unit receives the transmitted data, which is then further processed using Node-Red. This allows for comprehensive analysis and visualization of the solar device's performance metrics.

By implementing this remote monitoring solution, personnel can efficiently monitor and manage solar device batteries from a distance, enhancing convenience and ensuring timely maintenance interventions when necessary.

4. OdooPush

```
#-----  
datain = datain.split(',')  
  
def data(number):  
    if(((datain[number].strip()).casefold() == "pass" or (datain[number].strip()).casefold() == "fail"):  
        return (datain[number].strip()).casefold()  
    else:  
        return datain[number].strip()  
#-----  
  
#odoo, moid, data(n)  
#Copy and paste all the line from above until this line. This is mandatory.  
  
#Find product ID  
product_id = odoo.env['mrp.workorder'].browse(moid).product_id  
  
#Create new Serial Number and get the id  
id = odoo.env['stock.production.lot'].create({"name": data(0), "product_id": product_id.id})  
  
#Write the Serial Number ID in Serial Number field  
odoo.env['mrp.workorder'].browse(moid).write({'final_lot_id': id})  
  
#Create if-else statement to select Pass/Fail button
```

Development of Automated Data Input Software for Odoo (ERP)

Using Python along with Tkinter, I created a software solution to streamline data input processes into Odoo, an ERP software platform.

- **Automated Data Injection:** Users can input the Manufacturing Order Number and relevant data into the software interface. Upon submission, the software automatically injects the data into Odoo, eliminating the need for manual entry.
- **Customizable Operational Files:** Operational files can be customized to suit specific data input requirements. This flexibility allows users to tailor the software to their unique business processes.
- **User-Friendly Interface:** The software features a user-friendly interface developed using Tkinter, making it intuitive and easy to navigate for users.

By automating data input tasks and providing customization options, the software enhances efficiency and accuracy in data management within the Odoo ERP system.
